React	Node.js
React Native	Postgres, mySQL
Redux	REST, GraphQL
MaterialUI, Bootstrap	AWS

EDUCATION

York University

2014 - 2019

B. Eng, spec. Honours Degree, Mechanical Engineering

PROFILE

Hey, my name is Shahbaz Siddiqui and I am a software engineer. I have contracted with many different clients building web applications in React and Go.

I'm a self-taught developer, and am always looking to improve my skills. I have a particular interest in backend web app development.

I specialize in full stack development, preferring React on the frontend and Go on the backend. I can build you an app from scratch.

WORK EXPERIENCE

Senior software engineer

Startup (stealth mode)   Mar 2024 - Present

- Founding engineer responsible for building entire backend and frontend of a mobile-first travel application built in Go.
- Designed database, APIs, authentication flow and application architecture.
- Designed and implemented frontend layout using React.

Senior software engineer

Thoughtworks   Oct 2021 - Mar 2024

- In a microservices architecture, developed GraphQL schema and API design for a large sports application built in Golang.
- Independently selected tech stack and designed application architecture of fitness client, translating requirements into functional outcomes.
- As tech lead, launched internal React web app to centralize all company project data.

Software engineer

Deloitte   Aug 2019 - Sep 2021

- Building frontend applications with React in various industries: financial, public sector, and healthcare.
- Independently refactored entire healthcare project CSS architecture into a more organized, robust format implementing BEM and Bootstrap.

Cloud analyst (intern)

Deloitte   May - Aug 2018

- Introduction to agile methodology and software development life cycle in a cloud setting, acting in and assistive capacity.
- Project management, scoping, and bug triaging.
